https://github.com/KumarAsishSahoo | https://www.linkedin.com/in/kumar-asish

PROFESSIONAL SUMMARY

Aspiring Data Analyst with internship experience at Q Spiders, gaining hands-on experience in SQL, Power BI, Tableau, Excel, and Python. Skilled in ETL processes using Power Query and Pandas, data validation using SQL and Excel, data modeling using efficient DAX, exploratory data analysis (EDA), Statistical analysis and data visualization using Power BI, Matplotlib and Seaborn. Familiar with data quality management, data hygiene and data governance principles. Expertise in KPI reporting and building interactive dashboard that support business decisions and improve reporting efficiency. Designed and optimized end-to-end data analytics pipelines and Automation using Power BI, Microsoft Excel and Python. Currently exploring Cloud based data warehouse and data Lakehouse platforms like Snowflake and Databricks. Also have experience as an Email Marketing Intern at ASP OL Media, developing marketing knowledge, business understanding, and communication skills. Detail-oriented with strong analytical and problem-solving skills, passionate about automating repetitive tasks and transforming raw data into actionable insights for better business decisions.

TECHNICAL SKILLS

SQL: PostgreSQL, Oracle SQL, MySQL, Joins, View, Aggregations, Subqueries, CTEs, Window Functions

Excel: Data Cleaning, Data Validation, Pivot Tables, Power Query, VLOOKUP, XLOOKUP, INDEX-MATCH, Conditional Logic, Charts, VBA

Power BI: Data Modeling, Table Relationships, DAX Measures, KPI Reporting, Dashboard Development

Analytics: ETL, ELT, EDA, Data Quality Checks, Trend Analysis, Customer Analysis, Sales Analysis, A/B Testing, MIS Reporting, Predictive & Descriptive Analysis, Pattern Identification methodologies

Python & Analysis: Python, Pandas, NumPy, PySpark, Matplotlib, Seaborn

Cloud: AWS, Amazon S3, Amazon Athena, Amazon Redshift, AWS Glue, Amazon QuickSight, , Snowflake , Databricks

AI Tools: ChatGPT, Claude, Microsoft Copilot, Prompt engineering

Tools: Git, GitHub, VS Code , Google Colab, Jupyter Notebook

EXPERIENCE

Data Analyst Intern Jun'26

Q Spiders Bangalore, India

- Performed data ETL, ELT and validation to improve data quality, consistency, and reliability for analysis.
- Used SQL and Python to manipulate datasets, analyse trends, and extract meaningful insights to support data-driven decisions.
- Applied Python libraries such as Pandas, NumPy, and Matplotlib for data manipulation, EDA and visualization.
- Used Power Query to clean, transform the large datasets to analysis ready in Microsoft Excel and Power BI.
- Write efficient DAX for Calculated measures, Calculated columns, Time intelligence like year-over-year growth on Sales and Data aggregation and Filtering.
- Developed Power BI dashboards and Excel reports to present KPI, analytical findings, and business trends.
- Worked on data quality checks and repeatable data preparation workflows to improve reporting efficiency and reduce manual effort by .
- Designed and optimized end-to-end data analytics pipelines and Automation using Power BI, Microsoft Excel and Python.
- Documented analytical findings and presented insights in a clear, structured format to support business understanding and decision-making.

Email Marketing Intern Oct '25 — Feb '26

ASP OL Media Nagpur, India

- Created, scheduled, and monitored email marketing campaigns targeting US-based users across different customer segments and marketing objectives.
- Performed open-rate and click-through-rate (CTR) analysis to evaluate campaign effectiveness and identify opportunities for performance improvement.
- Conducted A/B testing on campaign elements to compare user responses and support data-driven optimization of email campaigns.
- Performed customer segmentation based on user behaviour and engagement patterns to improve campaign targeting and relevance.
- Analysed historical campaign and product interaction data using SQL to identify which products performed better during specific seasons, supporting seasonal marketing and campaign planning.
- Evaluated campaign and user-interaction trends to identify opportunities for improving lead generation and customer acquisition.
- Prepared campaign performance reports using Excel and analytical outputs to communicate campaign trends and performance insights.
- Supported email automation and campaign scheduling to streamline recurring marketing activities and improve operational efficiency.
- Used data-driven insights to support decisions around campaign targeting, product promotion, seasonal opportunities, and future marketing initiatives.

PROJECTS

E-commerce Funnel & Retention Analysis

PostgreSQL | SQL | Microsoft Excel | Power BI

- Performed end-to-end analysis of five interconnected e-commerce datasets, covering data cleaning, validation, relational data modelling, and preparation using Excel and PostgreSQL.
- Developed complex SQL queries using Joins, CTEs, Window Functions, and aggregations to analyse customer behaviour, sales performance, acquisition channels, and retention patterns.
- Designed relational data models and established table relationships in Power BI; developed DAX measures and business KPIs to track revenue, order performance, customer conversion, and retention.
- Conducted conversion funnel analysis across product views, cart additions, checkout, and purchases, identifying a 33.71% overall conversion rate and opportunities to improve customer progression.
- Evaluated acquisition channel effectiveness, identifying Organic Search as the highest revenue-generating channel (₹23,205.55) and calculated an 83.59% customer retention rate.
- Developed interactive Power BI dashboards and a comprehensive project report, translating analytical findings into actionable business insights and recommendations.
- Leveraged AI tools for SQL problem-solving, query optimization, analytical guidance, troubleshooting, and improving project documentation and reporting efficiency.

RETAIL SALES TREND & CUSTOMER BEHAVIOUR ANALYSIS

SQL | Excel | Data Analysis

- Analysed retail transaction data to monitor revenue, order volume, customer behaviour, product performance, and sales trends across different time periods.
- Calculated and analysed key business metrics including total revenue, order volume, average order value (AOV), and revenue contribution to evaluate overall sales performance.
- Used SQL to segment customers by gender and purchasing behaviour, identifying customer groups and patterns contributing to sales performance.
- Performed monthly and yearly trend analysis to identify peak demand periods, changes in sales performance, and high/low-performing periods.
- Identified top-performing products and categories based on sales and revenue contribution to highlight key drivers of business performance.
- Analysed customer and product-level trends to generate insights supporting demand planning, sales performance monitoring, and data-driven business decisions.
- Developed structured SQL-based reporting outputs to enable consistent performance tracking and business-oriented analysis.
